I think the data tells us more than just figures, it helps us understand our users and their desires. I want to pursue data science because I want the business to use data to maximize their value, I started off as an accountant. I eventually migrated to IT section by getting certified. I am now skilled in HTML, CSS, JavaScript, NodeJs, ReactJs, MongoDB, and currently learning UX design. I believe I have many qualities that make me a strong WebDV and a WebDesigner. I have confidence in my decisions and my ability to manage time and my perseverance to accomplish tasks in time and I have strong communication skills, and I'm an open minded person.
